Summary

Developer and programmer with three years of expertise building dynamic and interactive online apps.

I am a highly motivated and detail-oriented developer who specialises in creating responsive and high-performance user interfaces with Angular and Angular Material.

Experienced with integrating real-time data via WebSocket APIs and optimising application performance using lazy loading and modular design. Committed to remaining current on technical changes and finding new opportunities for personal and professional development.

Experience

Adis Technology   01/05/2021 - 31/05/2023
Web Devloper   Surat, Gujrat - Onsite

As a new employee, I took on a variety of responsibilities across many projects, tackling hard technological challenges and contributing to feature development via research and experimentation.

As a junior developer, I was assigned a new project and was in charge of designing the user interface as well as building REST APIs. After several months of hard effort, I was given the honour of leading the development team and being the project's primary developer.

Our team built a clean, user-friendly online application while maintaining direct communication with clients to address faults and provide appropriate solutions.

In addition, I had the opportunity to mentor interns, which broadened my skill set and indicated a strong desire to guide rising talent.

Quantsapp Pvt. Ltd.   01/06/2023 - 30/09/2023
Angular Developer   Mumbai, Maharashtra - Onsite
🔗 https://web.quantsapp.com/

Used Angular 16+ and Angular Material to build responsive web applications and optimise UI design.

Added WebSocket APIs for real-time stock market data, increasing user engagement and data-driven decision-making.

Lazy loading and modular app design increased application performance, resulting in efficient, high-performing online applications.

Bridginex   23/10/2023 - Present
Frontedn Developer   Surat, Gujarat - Remote
🔗 https://www.bridginex.com/

It was my first time working as a remote developer for a service-based company, and I enjoyed it since I was given a variety of tasks, which was a new experience for me as I had previously solely worked for product-based organisations.

The most prominent projects I worked on were https://www.letsfamily.ch/de/, a website that allows parents to participate in various events with their children and receive prizes, and https://s-store.at/, a leasing/loaning web application for a banking system.

Reworked the current organisations website, which proved to be a beneficial experience in terms of honing my skills and boosting the site's functionality and usability.

Education

Z. S. Patel College of Management and   2017-03-01 - 2020-09-01
Technology   Bachelor of Computer Applications

I've worked on various projects to build and maintain websites and have studied HTML, CSS, and JavaScript. Through group projects, I've worked with students to develop my teamwork, communication, and task delegation skills. Through coursework and practical projects, I have honed my critical thinking and problem-solving abilities, which have enhanced my capacity to come up with innovative solutions to challenging issues.
